

## INFRAHORN

Infrahorn is a waveguide which can be used in conjunction with a pair of IB218 for applications with extreme low-frequency bass requirements.

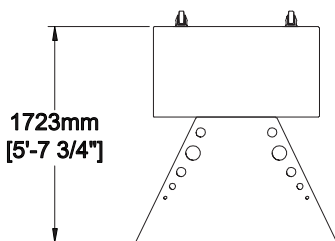

When bolted directly to the front of two IB218, the waveguide increases the output of the pair by up to 10dB at 33Hz. The additional loading provided by the Infrahorn significantly enhances both the efficiency and directivity of the IB218. Infrahorns can be used singly or stacked above each other in multiples to produce unprecedented low-bass performance. Where space permits, the Infrahorn represents a cost effective way of maximising Infrabass output, whether within the installed environment or for outdoor arenas.

### Features:

- Increases efficiency, directivity and projection of a pair of IB218 (extra 10 dB at 33Hz)
- Optional wheels available

Specific crossover settings can be found at [www.funktion-one.com/support](http://www.funktion-one.com/support)
